The Splash screen provides the name of the app along with Student name, student number and a logo for the app. There are also two buttons, one which is an exit button and the other which sends the user to the main menu of the app.

The main screen is where the user will be navigated to once they click the main menu button. Here the user will be able to input the weather data they require the average.

The user then has the option to clear the data if the data they input is incorrect and they wish to change it, or proceed further to see a more detailed average, min, max temperatures and other weather conditions they might want to see. The user also has an option to navigate back to the main screen from here.

The detailed views screen displays information on each days different tempratures

This screen also gives details about each days min and max temprature and its weather conditions.
